

Corrigendum

In regards to Vol. 3 Issue 1 publication of a research article "General health Status and *Tridosha* analysis of urban high-risk Diabetes after 3- month Diabetes Yoga Protocol: a pilot study", There is a minor change in citation for the work mentioned on Page no 6, under Tridosha Questionnaire, line no 1–6. A part of published work has been replaced as per information below:

Already published

Page no 6, under Tridosha Questionnaire, line no 1–6 "Tridosha is a scientifically valid questionnaire (45). It is a shortened version of the Mysore Tridosha Questionnaire (46) consisting of a total of 60 questions. Each dosha (Vata, Pitta, and Kapha) represent 20 questions that have three promising answers "Does not apply to me = 0", "Applies to me somewhat = 3", "Applies to me mostly = 6"

Amendment

"The conception of Tridosha has been discussed in the traditional Ayurvedic scriptures. Combinations of Tridosha vi

z. Vata, Pitta and Kapha are present in every human being. Each dosha is associated with the specific functions of the human body such as Vata is responsible for homeostasis, Pitta is responsible for negative entropy production and Kapha is responsible for inheritable structure (45). The percentage of each dosha can be measured by Tridosha Questionnaire consisting of a total of 60 questions as established by Telles et al (46). Each dosha (Vata, Pitta, and Kapha) represent 20 questions respectively with three promising answers "Does not apply to me = 0", "Applies to me somewhat = 3", "Applies to me mostly = 6" (46)."
